DP-6T-MD, TE-6K-MD DP-6K-MD, TE-6T-MD

DESCRIPTION:

Series 6 are centrifugal magnetic drive pumps, eliminating the need for a shaft seal. Pumps can be serviced with an adjustable wrench. See the parts list for a breakdown of parts.

OPERATION:

Pumps are not self-priming, lack a suction lift, and thus require a flooded suction. Pumps **cannot be run dry** because the impeller requires the liquid being pumped for lubrication. The direction of motor rotation should be clockwise when facing the inlet of the pump. For liquids with a specific gravity greater than water, have a higher viscosity, or for elevated temperatures, a trimmed impeller may be necessary. For application assistance, contact March Pump.

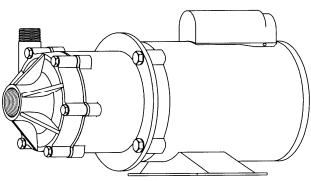

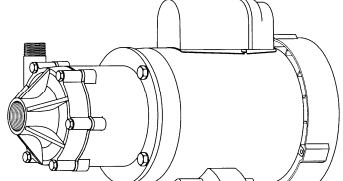

ELECTRICAL:

DP-6-MD pumps are 115/230V, 1 phase, drip proof.
 TE-6-MD pumps are 115/230V, 1 phase or 230/460V, 3 phase, TEFC.

LIMITED WARRANTY:

March pumps are guaranteed only against defects in workmanship or materials for a period of one year from date of manufacture pumping water. For the complete warranty and to register online go to www.marchpump.com/warranty-registration

SPECIFICATIONS	DP-6T-MD	DP-6K-MD	TE-6T-MD		TE-6K-MD	
						
Model Abbreviations	T: Ryton & Polypropylene	K: Kynar	T: Ryton & Polypropylene		K: Kynar

NOTE: When replacing impeller bushings in the field, the plastic bushings must be bored to size after they have been pressed into the impeller. Bore to 0.379/0.381 inches I.D. The carbon and ceramic bushings are to finished size and do not require boring after assembly. When attaching the Drive Magnet to the motor shaft, position the face of the Drive Magnet 3/32 inch below the face of the Motor Bracket.

NOTE: Contact Factory for other materials and/or parts not listed.

Explosion proof and special voltage motors are available upon special order.
